The bar above represents the difficulty of questions you faced, and the number you got correct in each category.

Question Wise Breakdown

Q: Which SQL clause is used to filter the results of a query based on a specified condition, and how does it differ from the WHERE clause?

Your Answer (correct) : HAVING clause is used after GROUP BY and filters aggregated data, unlike WHERE which filters before aggregation.

Q: In SQL, what is the purpose of the COALESCE function, and how does it differ from the ISNULL function?

Your Answer (correct) : COALESCE returns the first non-null value from a list, while ISNULL replaces null with a specified value.

Q: Which SQL command is used to remove a table from a database, and how does it differ from the TRUNCATE command?

Your Answer (correct) : DROP command removes the table and its data, while TRUNCATE removes only the data.

Q: In SQL, how does the INNER JOIN clause differ from the LEFT JOIN clause?

Your Answer (correct) : INNER JOIN returns only matching rows from both tables, while LEFT JOIN returns all rows from the left table and matching rows from the right table.

Q: What will be the output of the following SQL query if executed on a table 'employees' with columns 'id', 'name', and 'salary'?

Your Answer (correct) : The query will return the name of the employee with the highest salary.

Q: Consider the following SQL query. What is the missing line that will correctly calculate the average salary of employees in each department?

Your Answer (correct) : GROUP BY department_id

Q: Identify the error in the following SQL query.

Your Answer (correct) : The GROUP BY clause is missing a column.
